Benson Ngugi

Aspiring Web Application Security Analyst | Penetration Testing

Meru, Kenya • +254 727 374 449 • ngugibenson@proton.me
GitHub: github.com/enmessara • Portfolio: enmessara.tech

PROFESSIONAL SUMMARY

Information Technology undergraduate focused on web application security. Practical experience testing for OWASP Top 10 weaknesses (XSS, SQL injection, broken access control) with Burp Suite and Kali Linux, and building security tooling in Python. Documents findings clearly, with root cause, safe reproduction steps and fixes. **Seeking an internship or junior role** in application security, penetration testing or vulnerability assessment.

TECHNICAL SKILLS

Web Security	OWASP Top 10, XSS, SQL injection, broken access control, IDOR/BOLA, SSRF, authentication and OAuth flaws, business logic flaws
Tools	Burp Suite, Kali Linux, Wireshark, web vulnerability scanning, manual testing
Programming & Linux	Python (security automation and scripting), Linux command line, Git and GitHub
Reporting	Vulnerability triage and risk rating, clear reproduction steps, remediation advice

SECURITY PROJECTS

Web Scanner **(Python, open source)** github.com/enmessara/web_scanner

- Built a passive reconnaissance and attack-surface mapper that crawls a target with configurable depth, page limit and request delay.
- Seeds discovery from *robots.txt* and *sitemap.xml*, checks common sensitive paths, and flags missing security headers (HSTS, CSP, X-Frame-Options, X-Content-Type-Options).
- Designed to be safe by default: no exploit payloads are sent, and results are saved for later review.

Web Security Write-ups **(Study notes)** enmessara.tech/#writeups

- Wrote six structured write-ups: broken access control, SSRF, IDOR/BOLA, indirect prompt injection and tool misuse in LLM systems, business logic and race conditions, and broken authentication and OAuth.
- Each covers root cause, vulnerable versus fixed code, a lab testing method and remediation, mapped to the OWASP Top 10, API Security Top 10 and LLM Top 10.

Practical Web Security Labs Kali Linux, Burp Suite

- Carried out hands-on vulnerability assessments of intentionally vulnerable web applications, covering XSS, SQL injection and access control flaws.

EDUCATION

Meru University of Science and Technology 2024 – 2028 (Expected)
Bachelor of Science in Information Technology
Relevant coursework: Network Security, Web Engineering, Database Systems, Programming in Python.

CURRENTLY LEARNING

- PortSwigger Web Security Academy (access control, SSRF, authentication, OAuth, race conditions, web LLM attacks).
- API security, authentication and session attacks, and professional penetration test reporting.

ADDITIONAL

Ethics: tests only own lab environments, intentionally vulnerable applications and systems with written permission.
Interests: video editing (Premiere Pro, DaVinci Resolve) as a hobby.
